Tip 1

Move closer to the object that you want to photograph. When you do, there's less clutter in the picture, and the object you're interested in really stands out. Compare these two pictures...

Tip 2

Don't shoot the camera directly into light. If you do, the picture will look like this...

Remember, if the light is shining in your eyes, it's also shining right into the camera, and that's not good!

Instead, move so that the light is behind you when you're taking a picture. That way, the light is shining on the object which will make it look like this...

Tip 3

Instead of shooting head-on, try changing the camera angle. By taking pictures from all different angles, the object will look really interesting.

Artzooka your photos with these fantastic photo tips!
