

Upside Down Movie

Want to make a movie where an ordinary person climbs up a wall, or walks upside down across the ceiling? It sounds impossible, but with a few Artzooka tips and tricks, you can make movie magic.

Here's how:

climbing Up The Wall

1

First, hang a picture on the wall sideways.

2

Now, tie a rope to a chair.

3

Turn your camera sideways when you're filming.

4

When camera is rolling, bend down, walk toward the chair, pulling the rope. Use your acting skills to pretend that you're walking up the wall.

Here's what the camera will see:

crawling Along The ceiling

Let's take this scene to the ceiling!

1

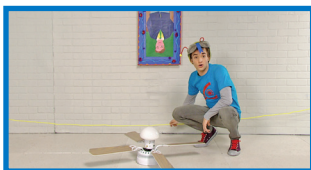

Now, turn the hanging picture upside down.

2

If you want, you can even add an old fan to the floor to make it look like a ceiling.

3

Attach the rope to a chair like before.

4

This time, make sure your camera is upside down when filming. Before you press record, give the fan a spin so it looks like it's on!

Here's what the will camera see:

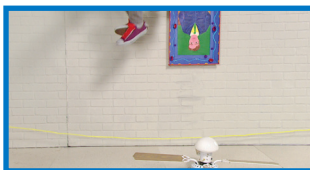

Jump Down From The ceiling

This is a little trickier, and you'll need a friend's help.

The camera is still upside down while your friend is filming.

1

Jump as high as you can! When your feet are off the floor, get your friend to turn off the camera.

Here's what the camera will see:

2

To make it look like you're landing, turn your camera right side up to film, and jump again!

- 1) When your feet are in the air, start recording.
- 2) Stop recording once you've landed.

It will look like you've jumped down from the ceiling and have safely landed on the ground again.

it's all action-packed fun when it's upside down **Artzooka Movie Magic!!**
