

Styrofoam Airplane

check list:

1. styrofoam cup
2. scissors
3. pencil
4. marker
5. paper ketchup cup
6. scotch tape

1

Use scissors to cut a straight line in the middle of the cup, and then cut all the way around to make a smaller cup. That will be the airplane cockpit.

2

Cut a tail out of the leftover styrofoam cup.

3

Use a pencil to poke holes into the side of the small cup. Make the holes really close together and then drag your pencil back and forth to create a slit.

4

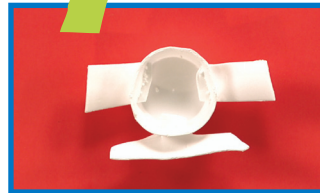

Slide the tail of the airplane into the slot.

5

Cut out a set of airplane wings from the styrofoam cup. Create the wings any shape you like.

7

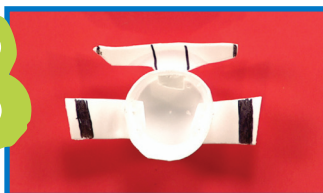

Slide the wings into each slit.

6

Poke holes at the sides of the cup just like you did for the tail and drag your pencil through the holes to make a slit.

8

Use a marker to jazz up the design of your airplane.

9

Decorate a paper ketchup cup and tape it on the nose of the airplane with scotch tape.

styrofoam airplanes are really fun to make! Make as many as you like and **Artzooka them** using any kind of materials.
