

Stencil Scans!

check list:

1. scanner
2. construction paper
3. pencil
4. scissors
5. anything with a cool print

1

Hand stencil

Use a pencil to trace your hand and when you're finished, cut it out. You've just made a stencil.
Now, let's Artzooka this!

Place your stencil on the scanner and place anything with a cool print or pattern (maybe a colourful pair of boxers, or a fun t-shirt) on the empty space of the stencil and scan it.

2

Butterfly stencil

Trace and cut out a butterfly stencil. Place the stencil on the scanner. Add flowers, leaves and super soft twigs to the empty space of the stencil.

Make sure you don't use anything that could scratch the glass surface of the scanner.

When you're finished, gently close the cover and press the scan button.

You can super scan-zooka anything you like. Try coming up with different patterns and textures for your stencil. You'll be amazed at what you've created!
