

Rocket Movie

**Make your own space movie without leaving Earth!
Follow the Artzooka tips to create movie magic!**

1 Background/Set

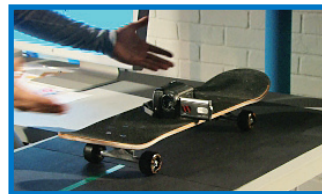

Create your background. A blue or dark grey sheet will help make it look like outer space. Add space toys and even a rocket ship model if you've got one to give your set an outer space look!

Use brown craft paper to make Space Mountains and don't forget to cut out a picture of the Moon! Cotton baton will make really fluffy clouds.

2 cool camera Trick

To create a steady zoom-in shot, place the camera on a skateboard and move the skateboard toward the rocket ship. The camera shot will look like you're moving towards the rocket!

To make it look like the rocket is ready for blast-off, shake the camera.

Now to make the rocket look like it's taking off, keep focus on the rocket and slightly tilt the camera down.

For a rocket chase scene: hold your camera right behind your rocket and move both the rocket and your camera at the same time. It will look like another rocket is on its tail! This effect is super exciting!

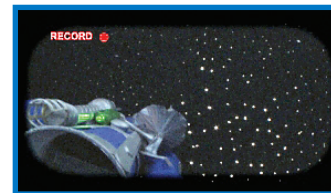

3 create Space

Create the solar system with papier-mâché planets and hang them on a pole.

You can also create an entire galaxy, too! Poke holes in black craft paper and hang it up. Shine your flashlight behind the craft paper and it will look like stars are shining in space.

Artzooka these ideas, and come up with some of your own, to make your space movie. You can also invite friends over to help put it all together!
