

## Nightlight

### check list:

1. tall clear skinny empty water bottle
2. scissors
3. piece of white paper (not construction paper)
4. pencil
5. paint (different colours)
6. 2 paintbrushes (1 small, 1 medium)
7. ruler
8. dark crayon (purple, red, or navy blue)
9. stir stick
10. small bowl of cooking oil
11. glue stick
12. small battery-powered light

1

Cut a tall clear skinny empty water bottle in half. Keep the bottom half and discard the top.

2

Use a pencil to draw shapes on a piece of white paper. Draw squares, circles, triangles, or anything you like! Paint the shapes different colours, then set aside the paper to dry.

Here is an example of what the finished paper will look like. Paint the background yellow—it will make it easier for the nightlight to shine through.

3

Use a ruler and a crayon to draw a line all the way across the paper, splitting it in half.

4

Place the ruler above the line, then colour in the bottom half of the paper with a dark crayon. The ruler makes sure you don't colour above the line.

5

Use a stir stick to make designs on the crayon half of the paper. How? Just rub off the crayon with the stir stick. Make a rectangle, triangles, circles, and stars.

6

Flip over the paper and brush cooking oil all over the back of the paper. Set it aside to dry.

Here is what the paper will look like when you finish colouring. The crayon part will be the bottom half of your nightlight.

7

When the paper is dry, place it oil side up. Run a glue stick along the top end of the paper and place the plastic bottle on the bottom end.

8

Wrap the paper around the bottle. The glue that you applied in Step 7 will stick the paper together.

9

You're almost done! Drop a small battery-powered light into the nightlight.

10

Turn off the light in the room. Wow! Look at the nightlight glow!

**Now that's Artzooka—glowy style!**
