Create a grid on the back of the skateboard using a pencil and a ruler:

Each line should be a ruler width apart.

Your grid will end up looking like a checkerboard.

Now take a square piece of cardboard and insert it in the shirt under the image you want to copy. The cardboard should be just a bit bigger than the picture.

Tuck the extra fabric under the cardboard to make sure it's extra tight.

Now add the elastics to form a grid on the t-shirt. Again, use the ruler to make sure the grid on your t-shirt is identical to the grid on your skateboard.

Once all the elastics are in place, line the two grids up. This will make it easier to copy from one grid to the other.

Copy the picture on the t-shirt to the skateboard, matching one square at a time. To help focus on one square at a time, we recommend that you cover the other squares with your hand or a piece of paper:

Once you've finished copying your picture, paint it any way you like!

Now you've taken an ordinary skateboard and turned it into an amazing Artzooka creation!
