

Underwater Movie Special Effects

Here are some fun Artzooka ideas on how to make an underwater movie without getting wet!

1

Background/Set

Create your background. A blue sheet will help make it look like the deep blue sea. Add toys, shells, a treasure chest, or anything you want to your underwater movie set!

2

Sea creatures

Create your own underwater creatures and attach them to a stick or clothespin, or tie them to a clothes hanger. That way, you can move your underwater creatures without getting your hands in the movie!

3

Lighting

Create SFX (special effects) lighting by shining a flashlight through a clear jug partly filled with water. To make the water really shimmer, give the jug a little shake!

4

camera Shots

Want a submarine in your movie? Use a toy sub and attach it to a stick. If you want to make the sub look really big, zoom the camera in for a close-up. To make your sub move, move your camera up and down, or side to side.

5

Lights, camera, Artzooka!

If you don't have a cameraperson, you can set up a stack of books and set your camera on top. Adjust the height of your camera by adding or removing the books.

Don't forget to yell "Artzooka Action!" when the camera begins to roll!

Put it all together and it's Artzooka Movie Magic!
