

# Straw Glider

1) Cut out these three parts.

If you want to use light cardboard, paste these parts on the cardboard and cut.

3) Tape a straw on top of the wing, into the V-shaped groove in the centre. Have the back end of the straw even with the vertical syabilizer, leaving the elevator free.

4) Insert vertical stabilizer into a slit cut on top of the straw.

5) Tape horizontal stabilizer to the bottom of the straw with the elevator facing back.

6) Attach a paperclip to the nose.
