4

You start with a 4x4 puzzle with some empty squares. These empty squares will have a highlighted border.

The puzzle is composed of four 2x2 quadrants.

You must fill the empty squares with the missing numbers by clicking on a number in the column on the right, dragging it to the empty square and clicking to drop it in the missing square.

**START**

## INSTRUCTIONS

Only one specific number can be placed in any specific square.

Each row and column should contain the digits 1 to 4. But to make it *really* challenging, each 2x2 quadrant should also contain the digits 1 to 4.

Fill in all the empty spaces, if they are correct, you win. If they are not correct and there is still time on the clock, you can replace any of the numbers you previously placed.

Your score is the number of seconds left on the clock.

You can click on the Hint button at any time. This will show you the numbers that are in the wrong location. If no numbers are wrong, your hint will simply tell you how many empty spaces you have left.
