

Bubbles!

You'll need:

- 1 cup liquid dishwashing soap
- 2 cups water
- ¼ cup glycerin (available at pharmacies)

Here's how:

Combine liquid detergent, water, and glycerin in a dishpan, cake tin, or other open container. Stir, do not shake. Making the solution a day in advance will make it stronger.

Bubble Makers

Young children enjoy experimenting with a variety of bubble makers for bubbles of all different sizes.

- Use a clean, plastic fly swatter (with lots of holes); dip in bubble solution and wave back and forth.
 - Cut the bottom off of a paper cup; dip the large end in the bubble solution, blow through the smaller end for bigger bubbles.
 - Dip one end of a toilet paper or paper towel tube (or cardboard juice can with both ends removed) into the bubble solution; blow through the other end.
 - Other bubble makers can be made from embroidery hoops, plastic berry baskets, and plastic straws.
- (Be careful that children don't inhale through straws)
